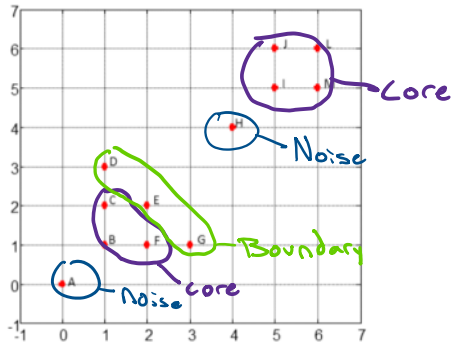
Homework 4

Thursday, March 12, 2026 8:27 AM

Suppose we apply DBSCAN to cluster the following dataset using Euclidean distance.



Given that MinPts = 3 and EPS = 1, answer questions a) and b).

a) Label all points as "core points," "boundary points," and "noise." (3 points)

Labeled Above

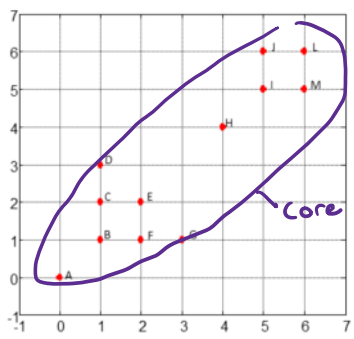
b) What is the clustering result? (3 points)

Cluster 1: {B, C, D, E, F, G}

Cluster 2: {I, J, L, M}

Noise: {A,

c) Repeat the above two questions when MinPts = 3 and EPS = $\sqrt{10}$. (4 points)



Cluster 1: {A, B, C, D, E, F, G, H, I, J, K, L, M}

Distance is large enough to span both clusters
